Summary

Highly motivated Computer Science fresh graduate demonstrating a solid grasp of core data structures, algorithms, and object-oriented design principles. Eager to apply strong analytical and problem-solving skills to build efficient, scalable backend systems and contribute to innovative software development.

Experience

Backend Engineer

Nov 2025 - Present

Airnav Indonesia

- Developed and launched a robust, scalable internal backend system using NestJS, significantly enhancing data processing capabilities and operational efficiency for critical internal functions.
- Engineered and deployed a self-hosted Minio object storage solution, leveraging presigned URLs to provide secure, controlled access to sensitive media assets, thereby mitigating external cloud dependencies and strengthening data security.
- Automated and optimized CI/CD pipelines utilizing GitHub Actions and Gitea Runner, coupled with Docker and Coolify for containerized deployments, resulting in reduction in deployment time and virtually eliminating environment-related inconsistencies across development and production.

Backend Engineer

Nov 2024 - May 2025

DOKU

- Optimized Payment Gateway service stability within a microservices architecture by proactively resolving critical Kafka Listener bottlenecks and intricate Redis caching issues, ensuring seamless processing across diverse payment methods.
- Engineered and launched a comprehensive transaction details feature while integrating a robust Risk Engine into the Isaku payment channel, significantly enhancing system functionality and bolstering security posture to mitigate fraud risks.
- Debugged and rectified complex asynchronous messaging flows and critical cache consistency problems in a high-volume distributed environment, improving data integrity and service reliability for core payment operations.

Backend Engineer

Apr 2024 - Jul 2024

SchoolTech Indonesia

- Developed and deployed a comprehensive suite of RESTful APIs using Laravel for a School Management System, enabling critical operations for student enrollment, course management, and administrative oversight.
- Engineered and integrated robust JWT authentication and Role-Based Access Control (RBAC) mechanisms, enhancing data security and ensuring granular access permissions across all system modules.
- Implemented API versioning to ensure backward compatibility and streamline future feature deployments, facilitating seamless integration and updates for the evolving platform.

Machine Learning Engineer

Nov 2023 - Jan 2024

Bangkit Academy Project Based

- Developed and fine-tuned Machine Learning models using TensorFlow to deliver predictive and analytical capabilities for a comprehensive financial management application.
- Implemented and deployed these Machine Learning models as robust web service APIs, ensuring seamless and efficient data exchange for real-time analysis within the application.
- Collaborated cross-functionally with Android development and Cloud Computing teams over a 3-month project cycle to successfully design, integrate, and launch ML-driven analysis features, significantly enhancing user financial insights and application functionality.

Data Analyst

Aug 2023 - Oct 2023

ESQ Group

- Managed and processed diverse transaction datasets from multiple databases, rigorously cleaning and validating data to ensure high integrity and readiness for analysis.
- Executed comprehensive exploratory data analysis (EDA) using MySQL and Power BI, effectively unifying disparate datasets and rectifying inconsistencies to enhance data reliability and usability.
- Developed compelling visual reports and interactive dashboards in Power BI, translating complex data into actionable insights that contributed to strategic improvements in ESQ training sales performance.

Education

Bachelor Degree

Aug 2021 - Aug 2025

STIMIK ESQ

Bachelor of Computer Science.

GPA: 3.68 / 4.00

Independent Study at Kampus Merdeka

Aug 2023 - Jan 2024

Bangkit Academy

Machine Learning Specialist – Graduate (Average Score 90.87)

Skills

Web Services API, MLOps, Spring Boot, NestJS, Laravel, Flask, Docker, SQL, Git, Power BI
